

Concrete Rust Stain Remover

Safe Non Hazardous ready to use Rust Stain Remover

This material is specially formulated to remove iron stains from concrete and brickwork without resorting to the highly acidic products normally associated with this product category. It has a uniquely chelated system which gathers up iron (rust) stains by penetrating into the substrates and “lifts” these out

It is important to allow the material sufficient contact time as the longer the material is left on the surface, the more effective it becomes. It will remove even long established stain although the longer the stain has been left or the older the stain becomes then contact time is extremely important.

Key Benefits

- *Unique action penetrates hard surfaces.*
- *Chelated system locks up removed iron and rust.*
- *Removes even long established stains*
- *Indicator color - show product is working*
- *Non Hazardous - safe to use*
- *Easy to apply*
- *Can be used on all concrete and brick work*

Application Details

The product is best used as supplied and applied to the surface and left to do its work. Brushing or agitating the entire area will assist the removal.

After a period of contact time it will be possible to see the product working as a purple color appears and it is then possible to flush the area with fresh water.
