

No Dew

Concentrated formulation of specifically selected Polymeric Surfactants.

Dew encourages disease development and moss when it is wet and warm enough for growth. Therefore reducing dew formation leads to healthier more disease resistant turf.

No Dew allows for mowing and maintenance operations to start earlier in the day thus saving both time and money.

Replaces the time consuming and laborious tasks of switching, brushing and hose dragging.

Action

These unique surfactants have a twin mode of action. Firstly they are very effective at reducing the surface tension of water molecules thus preventing dew formulation. Secondly they have a very strong binding capacity, which enables them to attach to the surface of the leaf giving superior longevity to other dew control products.

Application Guidelines

No Dew is most effective when applied to dry grass i.e. prior to dew formation. For best results use a flat fan nozzle. No Dew will be effective on dew at the time of application but will not stick to a wet leaf surface; effectiveness will be reduced.

Typically No Dew will disperse dew for 7 – 10 days after application. This may vary due to many factors such as dampness of grass at time of application, temperature, severity of dew, mowing regime and type of turfgrass being treated.

Key Benefits

- ***Excellent prevention of dew formation (up to 10 days).***
- ***Superior longevity to Organosilicone based dew control agents.***
- ***Gives a cleaner cut when mowing.***
- ***Start mowing operations earlier in the day.***
- ***Tank mix with Iron products, superb green up and dew control properties.***
- ***Cultural method of disease management.***
- ***Cost effective dew control operation, when compared to traditional switching and brushing.***
- ***Safe to beneficial soil microbes***

	No Dew	Water Volume	Area
Fine or Coarse Turf	1.6 – 3.0 fl oz	at least 2 gallons	1000 sq ft

Tank Mixing

No Dew can be tank mixed with other non-pesticides.
